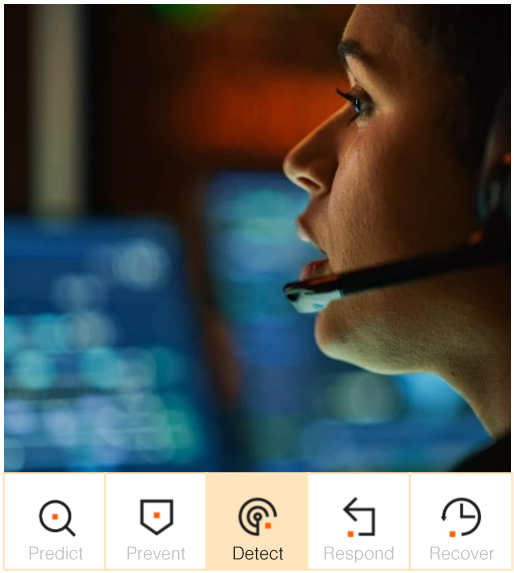
Managed Detection and Response

Detecting, hunting, and responding in your environment with your tools.

What's Managed Detection and Response (MDR)?

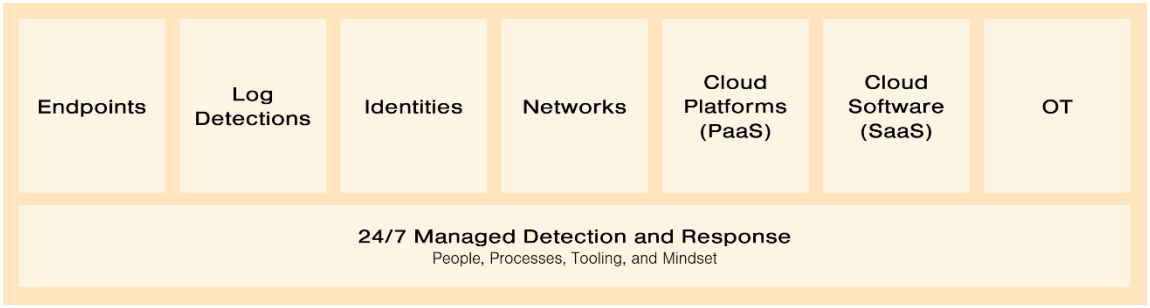
Many executive leaders ask themselves, "What's the most effective and efficient way to quickly increase our cybersecurity?"



In most cases, your first step should be acquiring the capability to effectively detect and respond to cyber threats. While preventive measures are also advisable, your top priority should be establishing surveillance and the ability to respond.

MDR addresses many practical and economic challenges associated with establishing these capabilities. With MDR, you can avoid the fixed costs and investment associated with having your security team available 24/7/365 and the added responsibility of ensuring they stay on top of the latest technology and threats. You'll also eliminate potential conflicts of interest by separating security from operations.

Proficient MDR providers leverage the best available tools to detect and respond immediately to threats across your entire environment (see figure below). They're informed by proprietary threat intelligence and continuous threat hunting and leverage the latest artificial intelligence while maintaining experienced human operators for everything new the AI isn't trained to detect. Delivery is transparent and digital. The best MDR services also provide privileged access to incident response and recovery teams.



MDR is the quickest and most effective way to substantially reduce the risk of a cyber attack harming your business. It also buys you time to systematically and cost-effectively approach cybersecurity for your business.

MDR Core

Essentials for organizations starting to improve their cybersecurity.

MDR Enterprise

Extended detection for organizations that are more mature in other defenses.

MDR Public

Tailored to the specific requirements of the public sector.

How We Do It

We proactively counter cyber threats, defend your data, and limit potential breach damage. Key features of our MDR service include the following:

Premium, Uncompromised Security – Our independence allows us to select the most suitable tools you may already have installed. We work directly within these tools to ensure optimal security and so the data stays with you. Our custom detection rules, though highly sensitive, occasionally yield false positives that we manually investigate to deliver optimal security without inconveniencing our customers.

Holistic Solution - 24/7 expert detection and response leveraging intelligence from our broad customer base, dedicated threat and incident response teams, and proactive hunting by seasoned professionals. Robust governance and a top-tier incident response team. It's all there.

Battle-Proven Service

Our MDR service has its origins in our incident response assignments. We needed visibility into threat actors' activities to respond, counteract, prevent spread, and kick them out from victims' environments.

As the leading incident responder in the Nordics, we perform these actions in all our incident response assignments (often for organizations that **don't** have MDR).

Our analysts are accustomed to dealing with threat actors – every day. And they repeatedly prove that they detect and respond to even the most advanced attacks.

Easy To Deploy - Deployment is possible within hours with full effectiveness. Rulesets are configured to your environment, industry, and risk profile and subsequently developed and continuously updated.

Transparent Pricing - Our pricing is straightforward, transparent, and typically based on what is being protected. We customize solutions based on specific needs such as threat exposure, budget, and risk tolerance.

What Sets Us Apart

Cyber Partner – We never pass on alerts. Our goal is to deliver only true positives with a recommended action. And we're with you all the way – providing critical incident response and recovery services and our complete suite of cybersecurity services.

Threat Focus - Our origins are not in technology or network operations but in incident response and pentesting. Our mindset is zero trust and the highest vigilance. We have capable threat hunters and know that skilled operators are essential for optimal security. Our MDR continuously uses the same principles, tools, and operational approaches we employ during live incidents.

Intelligence – Having one of Northern Europe's largest MDR and Incident Response operations uniquely positions us to understand threat actors, their methods, and tactics. Additionally, we've invested in capabilities and expertise to collect and harvest external threat intelligence.

Results - The fact that there have been **no serious breaches** among our MDR customers speaks for itself. Our approach allows us to identify and stop threats before it's too late, making our customers less attractive targets. Similarly, **none** of our incident customers have **ever** paid ransom after an attack. Our extensive capabilities often allow us to crack encryptions or restore customer data even when others have failed. We'll have your systems up and running faster than anyone else can.

How To Get Started

Get in touch to learn more or to configure the best solution for your business. Different options are available depending on what you need to protect, other requirements (e.g., compliance), and your operating model. Packages for Large Enterprise, SME, and Public customers are available.
