

Software Security Initiative

What's a Software Security Initiative?

Predict

Prevent

Detect

Respond

Recover

Application development requires continuous commitment to security at every stage of the process from planning to operations. It's nearly impossible to build a secure system based only on design activities or testing. The key is to learn the current and appropriate security levels for the applications and prioritize continuously. Without knowing the threats and appropriate risk level, it's impossible to implement correct and cost-effective security controls.

Truesec can help shift your application security activities from reactive to proactive. We help you design an application security program and offer continuous support to your development team through software development and project life cycles. We work closely with your team and help you maintain and follow up on your security roadmap.

What we can help you achieve:

- Improved security posture.
- Established secure default.
- Ability to consider and prioritize threats.
- Ability to identify and mitigate most security issues in-house.
- Visibility into your security posture.

Who It's For

Application security is not only for application security experts, but also for decision makers, developers, and others in the development chain. We want to help pave the way for developers to be able to focus on providing business value through secure defaults, training, the right amount of tooling, and pragmatic continuous analysis of the system.

Our expertise can help you both in securing the development processes themselves and in improving those processes to make it harder to introduce security vulnerabilities in the final product.

About Us

As a global cybersecurity company, we're proud to be at the forefront of protecting organizations and our society against cyber threats. Our purpose has been clear since day one: Creating safety and sustainability in a digital world by preventing cyber breach and minimizing impact. We never cease to challenge and reinvent ourselves to help defend your most valuable data assets every day.

How We Do It

The Software Security Initiative is a right-sized continuous application security program for your organization.

Building on Truesec's unique expertise in both cybersecurity and software development, we can augment or develop your application security team, knowledge, and processes.

- By providing decision makers with maturity status and basis for risk assessment, we can help organizations make appropriate security decisions.
- By focusing on continuous betterment and support, we can strengthen and empower the development team in application security areas rather than pointing fingers or only focusing on requirements. Our goal is to help you improve your application security posture.
- By focusing on prevention, we can help you "shift left" in application security. Finding security issues early greatly decreases both cost and remediation time.

Depending on the assignment and team size, we either interact with the entire development team or work together with assigned security champions from different teams. We take our experience and best practices and adapt to your team and your development process. We provide a much needed channel for your developers to obtain feedback on security questions and architecture. Either in the aforementioned sessions or in the form of your chat and issue management system (depending on what is agreed upon).

We'll help you:

- Acquire security awareness with metrics.
- Examine policies and risk appetite.
- Enable new ways of working.
- Implement alignment with expectations.

How To Start Benefiting From Software Security Initiative

Start by talking to your Truesec customer contact, or any of our experts. Together we'll begin the journey to shift your application security activities from reactive to proactive. The most common first step is to start with an overall Security Therapy session combined with an Application Security Maturity Assessment to find out what level of engagement works best for your team(s).
