

Standby Cybersecurity Incident Response Team

What Is a Standby Cybersecurity Incident Response Team?

It's a Service Level Agreement for a battle-proven Cybersecurity Incident Response Team, at a predefined hourly rate to be initiated by you, if you are affected by an incident or breach. This provides organizations high-priority access to experienced experts directly without the need to have their own internal departments for this purpose.

The Truesec Promise

When an organization is hit by a cyberattack it is critical to have experienced experts dealing with the incident as soon as possible. This to prevent the incident from escalating, to minimize the impact of the attack, and to make sure that no forensic evidence is destroyed.

A challenge for many organizations is to attract knowledgeable staff, and then ensure that they have the opportunity to use their knowledge. But also, it is to ensure that the expert knowledge is developed and refined with the latest changes in the field.

We have seen that many organizations struggle with making sure that their cybersecurity and forensic experts are up to date with intel on the latest threat actors, the threat landscape, and the latest research on how these should be handled.

The Incident Process
