

Vulnerability Detection

What's Vulnerability Detection?

Keeping control of your risk exposure is becoming mission impossible. The threat landscape has become too unpredictable while the attack surface keeps expanding. Vulnerability Detection from Truesec is a managed service that helps you continuously lower your cyber risk by focusing on the vulnerabilities that truly matter.

Our leading Offensive Security experts show you how to look at your environment through the eyes of an attacker and guide you to remedy the high-risk weaknesses first. Through practical remediation advice and unique insights gained from working with real-world exploits, Vulnerability Detection gives you the tools to protect your business and operations by preventing breaches before they occur.

Key Features You'll Receive

- Vulnerability identification, monitoring, and assessment.
- Continuously updated and prioritized list of high-risk vulnerabilities.
- Remediation advice with actionable recommendations.
- Critical notifications of vulnerabilities actively exploited in attack campaigns.
- Quarterly reports and review meetings.

Who This Is For

With digital transformation, businesses have moved assets to the cloud, increased the use of software-as-a-service (SaaS) and remote work, and even connected new Internet of Things (IoT) devices to their corporate IT networks.

Traditional vulnerability management struggles to keep up and has become outdated. It's now insufficient to guarantee a strong security posture and can, in the worst cases, even create a false sense of security.

This digitalization trend has increased the number of weaknesses attackers can use to access customer applications, systems, and networks. This is referred to as the attack surface.

About Us

As a global cybersecurity company, we're proud to be at the forefront of protecting organizations and our society against cyber threats. Our purpose has been clear since day one: Creating safety and sustainability in a digital world by preventing cyber breach and minimizing impact. We never cease to challenge and reinvent ourselves to help defend your most valuable data assets every day.

The Truesec Promise

We always strive for the best results for our customers.
That's a Truesec promise.

How It Works

When working to protect an IT environment from cybercriminals, you're under constant threat of attack while there's a limited amount of time and resources available to secure your data. It's imperative to focus on fixing the vulnerabilities that matter with minimum disruption to operations and user experience.

How We Do It

Vulnerability Detection combines Truesec Offensive Security experts with best-of-breed technology. To create a holistic view, we continuously map the attack surface by looking at internal and external assets (as desired), known and unknown, on-premise, and in the cloud.

We then prioritize vulnerabilities based on accumulated firsthand knowledge of the cyber threats currently facing organizations, business contexts, and expert insights into how malicious actors operate. Our specialists have extensive knowledge and experience from conducting 300+ yearly penetration tests across all sectors, including some of the most complex red team assignments.

We also have first-hand knowledge of the cyber threats currently facing organizations, gathered by our Cybersecurity Incident Response Team (CSIRT), one of the largest in Europe. This threat intelligence-driven approach enables us to proactively look for vulnerabilities we know are being exploited in emerging attack campaigns.

How To Get Started

The easiest way to get started is by talking to your Truesec contact or any of our experts.

Beginning with sensor-based vulnerability detection is the simplest if you have an existing EDR tool and can extend coverage at any time.
