

Attack Prediction

What's Attack Prediction?

Predict

Prevent

Detect

Respond

Recover

Imagine knowing about cyber attacks before they occur and how that could change your organization's approach to cyber defense and minimize your future risks.

We can pre-emptively detect threat activity targeting your organization by monitoring for specific cybercriminal activity signals outside your corporate network. Our broad coverage provides you with situational awareness of high-risk threats and enables the protection of key company assets such as identity, access, data, and brand.

The criminal ecosystem is mature and well-established, enabling practically anyone to become a cybercriminal; however, this has also provided us with several new opportunities to monitor their activity. This is accomplished by leveraging our unique insights from responding to cyber incidents and active attacker campaigns discovered by our managed Security Operations Center, monitoring the dark and deep webs, utilizing third-party intelligence, and utilizing our custom tools and analytics capabilities.

Extending Visibility Into Adversarial Space

APS is a managed threat intelligence service where we identify, track, and monitor cybercriminals, their marketplaces, forums, and communication platforms and provide you with relevant, actionable, and timely intelligence.

Signal - No Noise
Expert Assessment

No automated alerts – everything is triaged, investigated, and analyzed by human analysts.

Actionable
Usable Intelligence

Human-crafted intelligence provided with clear recommendations on mitigating actions and activities.

Unique Insights
Primary Data Sources

Truly unique intelligence sourced from Incident Response and our Security Operations Center.

About Us

As a global cybersecurity company, we're proud to be at the forefront of protecting organizations and our society against cyber threats. Our purpose has been clear since day one: Creating safety and sustainability in a digital world by preventing cyber breach and minimizing impact. We never cease to challenge and reinvent ourselves to help defend your most valuable data assets every day.

The Truesec Promise

We always strive for the best results for our customers.
That's a Truesec promise.

What We've Learned

Cyber attacks generally commence long before the actual breach, but unfortunately, most organizations today have limited visibility outside their own networks, resulting in a narrow view of the world in which cybercriminals operate.

Our Attack Prediction service provides you with actionable intelligence to employ before a cyber attack occurs by monitoring criminal activities outside customer environments and providing early warnings of targeted high-risk threats. This is achieved by combining leading threat intelligence capabilities in a managed service powered by best-of-breed technology and Truesec expertise.

The service empowers customers to be proactive and focus on protecting what matters most by continuously predicting cyber attacks. Organizations can now minimize the risk of breach from leaked data such as identities and access tokens, avoid costly reputational damage to their brand, and prevent revenue loss from operational disruption.

What's Included

Attack Prediction
(Critical)

Attack Prediction
(Holistic)

Indicators of Attack - Credentials

Discover stolen usernames, email addresses, API keys, passwords, session cookies, and authentication tokens.

Indicators of Attack - Data

Discover leaked company data such as intellectual property and source code, or other types of organisational data.

Indicators of Attack - Brand

Discover Darkweb mentions of brands and subsidiaries that may be indicative of an pending, or ongoing attack.

How To Get Started

With APS there is no software, or agents, to install which translates to an easy and quick setup. Getting started generally follow these simple steps:

1. Initial Setup Call – We'll require your domains, IP addresses, and brands.
2. Technical Onboarding – Validation and verification.
3. Completion – We can now monitor for future threats.

Begin by talking to your Truesec customer contact or any of our experts. Together we'll begin the journey to protect your organization's sensitive information and safeguard your corporate brand. By using Truesec's Attack Prediction service, you can rest assured that we'll keep you informed of any threat developments involving your organization and provide recommendations to mitigate any potential risks.
